

VINI VICI VIDI

PREMIUM SILVER COLLECTION

STRICT WEBSITE DESIGN & EXPERIENCE DOCUMENT

DESIGN LOCK

This document is the visual source of truth for the website. The implementation must prioritize the premium silver identity, cinematic opening, liquid-chrome atmosphere, editorial product presentation, 3D depth, flashlight interaction, restrained motion, and real commerce behaviour.

BLACK / SILVER / CHROME / WHITE / CONTROLLED GREEN

Build a world-class ecommerce experience for Vini vici vidi as a PREMIUM SILVER COLLECTION. It must feel like entering a cinematic luxury showroom rather than a standard jewellery store.

Non-negotiable design outcomes

Royal, cinematic, mature, sophisticated and immersive visual language.

Black + silver + chrome + white as the dominant palette; the client's green appears only as a restrained signature accent.

Mega cinematic opening sequence before the main homepage is revealed.

Liquid-chrome / metallic coded background with realistic reflections and depth.

Interactive flashlight / spotlight cursor effect that reveals metallic detail.

3D product/environment treatment used purposefully, not as decoration.

Large editorial typography that can overlap products and become part of the composition.

Homepage must visually showcase a large portion of the product collection.

Scroll experience must feel like moving through a luxury exhibition.

The UI must never resemble a generic Shopify theme or visibly AI-generated website.

REFERENCE RULE

Use the provided reference images as visual language only. Do not copy layouts, logos, wording, or brand identity. Vini vici vidi must have its own art direction.

Functional reality behind the visual layer

The experience is not a mockup. Guest checkout, Razorpay payment, server-side order verification, inventory updates, real-time price management, WhatsApp contact, and a practical admin workflow are required beneath the visual system.

The four supplied references establish the visual vocabulary for the site. They should be interpreted together rather than reproduced.

REFERENCE 01 - Editorial luxury composition: oversized typography, product overlap, negative space, precision annotations.

REFERENCE 02 - Dark bespoke atelier: black environment, craftsmanship storytelling, restrained silver highlights.

REFERENCE 03 - Art-directed product gallery: asymmetric product cards, central hero piece, editorial collection browsing.

REFERENCE 04 - Liquid chrome language: reflective silver, dark chrome surfaces, futuristic sculptural atmosphere.

Palette

Token	Hex	Usage
Void	#050505	Global background / hero void
Graphite	#0A0A0A	Primary sections / navigation
Carbon	#111111	Panels / secondary surfaces
Steel	#34383C	Deep chrome / dividers
Chrome	#6D7277	Metallic depth / secondary highlight
Silver	#BFC3C7	Text accents / metallic surfaces
Bright Silver	#D4D7DA	Primary metallic highlight
Ice White	#F2F2F2	Primary UI text / high contrast
Signature Green	#6C8F72	Minimal brand accent / active states / system cues

Material language

Brushed silver: fine directional grain, low contrast, slow light movement.

Polished chrome: mirror-like highlights used for hero objects and transitions.

Black titanium: deep, almost-black surfaces that absorb light and create contrast.

Liquid metal: abstract reflective forms used sparingly as transitions and environmental art.

Silver light: thin, sharp, controlled specular highlights; no rainbow chrome and no neon cyberpunk treatment.

Typography

Layer	Character	Primary use
Display	Modern grotesk / editorial sans	Hero names, massive words, collection statements
Editorial	High-contrast serif	Craftsmanship / heritage / luxury moments
UI	Clean sans	Navigation, buttons, product data, forms, admin
Micro-label	Compact uppercase sans	Material, collection number, stock, annotations

TYPOGRAPHY RULE:

Large type is architectural. Let words sit behind, beside or partially under products. Never fill the page with unnecessary paragraphs.

Grid

Use a wide editorial grid with generous negative space. The layout should feel precisely composed rather than component-stacked.

Area	Desktop rule	Mobile rule
Outer margin	5-7vw visual breathing room	5vw minimum
Hero	Full viewport; object may exceed grid	Full viewport, simplified 3D
Product gallery	Asymmetric / masonry / horizontal editorial composition	Swipe-first vertical composition
Typography	Display can occupy 30-80% of viewport width	Large but controlled, 20-45vw
Navigation	Minimal; transparent at top; condensed on scroll	Compact overlay / drawer
CTA	One primary action per scene	Sticky primary action only when useful

Composition principles

Asymmetry over repetitive symmetry.

Product + type + light should form one composition.

Use cropped imagery deliberately; never crop a product accidentally.

Use negative space to create luxury and focus.

Do not turn every element into a rounded card.

Do not place shadows under every component; depth should come from light and material.

The opening is a signature moment. It must feel like a luxury jewellery vault, private gallery or product film opening - not a conventional website splash screen.

Stage	Visual direction	Motion
01 / BLACK VOID	Near-black screen; tiny metallic glint	Almost imperceptible ambient movement
02 / SILVER LIGHT	Thin beam reveals metal texture	Slow sweep across surface
03 / BRAND REVEAL	Logo resolves from reflection, not a basic fade	Mask + light sweep + focus resolve
04 / HERO PIECE	Silver piece emerges from darkness	Slow camera move + controlled rotation
05 / TYPE	VINI VICI VIDI / THE SILVER COLLECTION	Editorial masked reveal
06 / ENTER	ENTER THE COLLECTION	Minimal CTA; subtle magnetic response
07 / TRANSITION	Opening scene expands into homepage	Cinematic scale / cross-scene handoff

NO-GO

Do not use an ordinary loading spinner, instant hero fade-in, loud particles, cheap lens flares, loud audio, or a gaming-style cursor.

Performance rule

The opening must be interruptible / skippable where needed and must not create an excessive blocking delay. Respect reduced-motion preferences and degrade gracefully on lower-powered devices.

Flashlight / spotlight

A soft spotlight follows pointer movement with inertia. It reveals hidden metallic texture and adds the feeling of a moving showroom light.

Wide diffusion and realistic falloff.

Low opacity; no harsh white circle.

Subtle silver reflection shift.

Slight delay / inertia for physical feel.

Apply to selected sections; do not force it on every element.

Disable or simplify pointer-only interactions on touch devices.

3D language

Use Three.js / React Three Fiber where product visualization gains real value. The 3D scene should look premium and physically plausible.

Asset	Material	Interaction
Hero jewellery	Metalness + controlled roughness + reflection environment	Slow rotation / camera drift
Chrome sculpture	High reflection / dark environment	Scroll-linked camera movement
Particle field	Extremely sparse	Responds subtly to light / scroll
Product focus	Real product image or model	Micro tilt / depth response

3D RULE

3D is not decoration. Every 3D object must communicate product value, material, depth, or transition.

Treat the homepage as a sequence of cinematic scenes. The user should feel they are moving through an exhibition rather than scrolling through stacked sections.

Scene	Purpose	Key motion
01 - Void	Set atmosphere	Dark-to-light reveal
02 - Silver light	Introduce material world	Light sweep / reflection
03 - Brand	Establish identity	Type mask / depth
04 - Hero product	Create desire	3D rotation / camera drift
05 - Collection	Introduce categories	Typography + image movement
06 - Product gallery	Show many products	Horizontal / asymmetric movement
07 - Offer	Surface promotion	Metallic strip / controlled emphasis
08 - Craftsmanship	Show making	Pinned image + text transition
09 - Featured	Highlight selected pieces	Large editorial product scenes
10 - Availability	Surface real stock states	Subtle status cue
11 - Brand story	Build meaning	Slow image / type movement
12 - Shop	Strong conversion point	Focused CTA scene
13 - Contact	WhatsApp / support	Minimal dark scene
14 - Footer	Final brand impression	Massive type / slow fade

Motion stack

Lenis for smooth scrolling.

GSAP + ScrollTrigger for pinned and timeline-driven sequences.

Framer Motion for component-level state transitions where appropriate.

CSS transitions for simple hover/focus states.

RequestAnimationFrame only when necessary for custom visual loops.

Hero composition

Use one dominant real jewellery asset. Let giant typography and metallic environment frame the product instead of placing the object inside a conventional hero card.

Collection showcase

The homepage must show many products early. Use the supplied real product images from the client assets wherever possible. The product gallery should feel like an exhibition.

Element	Required treatment
Collection title	Oversized editorial typography
Product arrangement	Asymmetric, layered, central-feature composition
Product image	Large, high-fidelity, dark/luxury treatment
Product name	Small, clean, uppercase or editorial label
Price	Clear, high-contrast, backend-driven
Offer	Dynamic; visible when applicable
Stock	Dynamic; only shown from actual inventory
Interaction	Hover / quick view / add to cart / secondary image
Navigation	Drag, wheel, swipe and subtle arrow support

KEY VISUAL RULE

Do not hide the collection behind a generic product grid. The homepage itself is a primary discovery experience.

Product card

Product cards should look like editorial object labels, not marketplace tiles.

Recommended hierarchy: IMAGE -> PRODUCT NAME -> MATERIAL / COLLECTION LABEL -> CURRENT PRICE -> OFFER / STOCK STATE -> ACTION.

Product detail page

Module	Behaviour
Image gallery	Large media, zoom, secondary views, optional 3D
Product info	Name, material, description, specifications
Price	Current, previous and savings where applicable
Availability	Actual inventory state
Actions	ADD TO CART, BUY NOW, CHAT ON WHATSAPP
Trust	Shipping / return / care details from approved content
Related	Editorial recommendations, not endless cards

Offer & stock states

50% OFFER must be admin-controlled and shown only for products / campaigns to which the offer applies.

Low-stock labels such as ONLY 3 LEFT must be generated from real inventory.

Do not hard-code scarcity text or random numbers.

Use motion / contrast to draw attention without turning the site into an aggressive discount marketplace.

Guest checkout

Customer login and registration are NOT required. Customers must be able to buy directly as guests.

Step	UI direction
01 / Contact	Minimal form, premium spacing, clear validation
02 / Delivery	Address and contact information
03 / Payment	Razorpay checkout
04 / Confirmation	Order reference, status and support path

Cart

Use a slide-out cart drawer where possible.

Show product, quantity, current price, discount, subtotal, shipping and total.

Allow quantity adjustments while validating stock.

Keep checkout action dominant and visually calm.

WhatsApp

Integrate WhatsApp naturally as a support / product enquiry pathway. Use premium contextual CTAs such as ASK ABOUT THIS PIECE, NEED HELP?, and TALK TO US.

Shopify-like operational flow

The public website should feel premium and custom, while the operational flow should be reliable and familiar to the business owner.

Event	Required system action
Checkout submitted	Create payment intent / Razorpay order securely
Payment succeeds	Verify server-side / webhook; mark payment successful
Order confirmed	Persist full order snapshot
Inventory update	Reduce inventory atomically
Admin notification	Surface a new order in admin
Status change	Persist timeline: NEW -> CONFIRMED -> PROCESSING -> PACKED -> SHIPPED -> OUT FOR DELIVERY -> DELIVERED
Exception	CANCELLED / REFUNDED states supported
Price changes later	Historical order keeps its original purchase price snapshot

SECURITY

Never trust frontend-submitted prices, discounts, stock or payment status. The backend calculates and verifies the final order.

Admin modules

Module	Capabilities
Products	Create, edit, archive, media upload, category, material, specification
Pricing	Current price, previous price, discount, scheduled / effective changes
Inventory	Stock counts, low-stock alerts, out-of-stock state, adjustments
Promotions	50% offer configuration, timing, product / collection targeting, activation
Orders	Search, filter, view customer/order/payment details, update status
Content	Homepage hero, featured collection, promotional strips, story content
Media	Product images, campaign images, supporting assets
Settings	Payment, WhatsApp, shipping, policy links, admin controls

Admin visual direction

Admin does not need to imitate Shopify visually. Use the same Vini vici vidi visual identity in a simplified, practical dark interface. Function first; luxury styling second.

Page	Primary design intent	Core features
Home	Cinematic brand + product discovery	Entry, hero, collection, offers, craft, contact
Shop / Collections	Editorial browsing	Categories, filters, search, product discovery
Product Detail	Luxury product presentation + conversion	Media, specs, price, stock, cart, WhatsApp
About	Brand / craftsmanship story	Editorial narrative, imagery
Gallery / Portfolio	Visual world of the brand	Campaign / collection images
FAQ	Clear support information	Accordion / searchable where appropriate
Contact	Human support	Phone, email, WhatsApp, map if approved
Policies	Trust + compliance	Privacy, terms, shipping, returns
Cart	Review order	Quantities, price, discount, total
Checkout	Guest conversion	Contact, delivery, Razorpay
Order confirmation	Reassure + next steps	Order reference, status, WhatsApp support

NAVIGATION

Do not include customer login or registration in the public navigation. Admin authentication is separate and private.

Responsive

Desktop receives the full cinematic treatment.

Tablet receives a lighter 3D and interaction profile.

Mobile uses touch-first gallery interactions and a simplified scene system.

No horizontal overflow, clipped text, broken 3D or impossible navigation.

Sticky add-to-cart on mobile where it improves conversion without blocking content.

Accessibility

Semantic HTML, keyboard navigation and visible focus states.

Readable contrast and descriptive alt text for product imagery.

Reduced-motion support; pointer-only effects have touch fallbacks.

Forms expose clear errors and success states.

Performance

Use WebP / AVIF, responsive sizes and lazy loading.

Compress and optimize 3D textures and models.

Code-split heavy 3D / animation bundles.

Prevent decorative effects from blocking the first meaningful content.

Use mobile fallbacks for effects that are too expensive.

Layer	Preferred approach
Frontend	Next.js / React + TypeScript
Styling	Tailwind CSS or carefully structured CSS
Motion	GSAP + ScrollTrigger + Lenis; Framer Motion for component states
3D	Three.js / React Three Fiber
Backend	Production-ready API for catalog, pricing, inventory, orders, admin
Database	Production-ready relational database
Media	Cloud object storage / optimized CDN delivery
Payments	Razorpay with server-side verification + webhook handling
Messaging	WhatsApp integration
Admin	Private authenticated admin routes

Data-driven requirements

Product price comes from backend data.

Inventory count comes from backend data.

Offer configuration comes from admin data.

Order totals are computed / verified server-side.

Historical order snapshots preserve purchase-time values.

Never use

Random purple/blue gradients, generic neon cyberpunk styling, or glowing blobs.
Endless rounded glass cards or repetitive SaaS-like layouts.
Generic AI-generated jewellery models replacing the real product assets.
Fake testimonials, fake certifications, invented product claims or invented scarcity.
Over-animated sections where every object moves continuously.
Generic hero copy that could belong to any jewellery brand.
A visual clone of Shopify, the Pinterest references, or another jewellery site.

Use instead

Real product photography and real client assets first.
Human-looking editorial composition with precise asymmetry.
Physical material logic: light, reflection, roughness, shadow and depth.
Sparse microcopy, large display typography and high-quality spacing.
Slow, intentional motion that communicates material or hierarchy.
Original Vini vici vidi art direction derived from the combined reference language.

Asset type	Rule
Logo	Use the client-supplied final logo / brand assets
Products	Use actual client jewellery imagery wherever available
Hero	Select the strongest real product asset; do not invent a different jewellery piece
Background art	Can be procedural / 3D / generated as environment, but must not misrepresent products
Copy	Use approved brand copy; placeholders must be clearly marked during development
Policies	Use actual business policy text once supplied
Offers	Controlled by admin; campaign terms must be accurate
Reviews / certifications	Only display when supplied and approved

Reference inputs

Google Drive design folder: <https://drive.google.com/drive/folders/1Nh233qye8g5thXSxmRpe-qNR7sW4Qxvg>

Pinterest references: <https://pin.it/3SWDf8xXX> | <https://pin.it/5wuE11UDX> | <https://pin.it/3lM90fY9z> | <https://pin.it/6q2lo1xMo>

Note: the linked Drive/Pinterest sources are reference inputs; the four images supplied directly in this conversation are embedded in this document as the visual board.

- 01 [] The opening feels cinematic within the first seconds, not like a generic splash screen.
- 02 [] The visual world is black / silver / chrome / white with restrained green accents.
- 03 [] The website feels like a premium silver showroom, not a standard jewellery store.
- 04 [] The cursor spotlight feels like a physical showroom light and is not visually noisy.
- 05 [] 3D is purposeful and performant, with sensible fallbacks.
- 06 [] Scroll transitions feel smooth, intentional and editorial.
- 07 [] Large typography and jewellery products are composed together rather than separated into blocks.
- 08 [] The homepage prominently showcases many real products.
- 09 [] Product cards and detail pages look custom, editorial and premium.
- 10 [] Login / registration do not appear in the customer journey.
- 11 [] Guest checkout works end-to-end.
- 12 [] Razorpay is integrated and payment is verified server-side.
- 13 [] Order creation persists correctly after successful payment.
- 14 [] Inventory reduces correctly and drives low-stock states.
- 15 [] 50% offer messaging is admin-controlled.
- 16 [] Price updates are backend-driven and reflected consistently.
- 17 [] Historical order prices remain unchanged after later price edits.
- 18 [] WhatsApp is integrated cleanly.
- 19 [] Admin can manage products, prices, stock, offers and orders.
- 20 [] No fake scarcity, fake testimonials, fake certifications or invented product claims.
- 21 [] The result does not resemble a generic AI-generated site.
- 22 [] Mobile remains premium and usable, even with reduced 3D effects.
- 23 [] Performance remains acceptable with real product media loaded.
- 24 [] The website is original and does not copy the reference sites.

Build Vini vici vidi as a cinematic digital luxury showroom for premium silver jewellery.

The visual formula

01

EDITORIAL JEWELLERY + BESPOKE ATELIER + ART-DIRECTED GALLERY + LIQUID CHROME

02

3D + SILVER LIGHT + FLASHLIGHT INTERACTION + MASSIVE TYPOGRAPHY

03

REAL PRODUCT ASSETS + GUEST CHECKOUT + RAZORPAY + REAL INVENTORY + ADMIN CONTROL

The test

The final website should make a visitor feel that they have entered a private silver exhibition - with the cinematic polish of a luxury campaign and the reliability of a real ecommerce platform.

The visual layer should be memorable. The commerce layer should be trustworthy. Neither should compromise the other.

FINAL LOCK

PREMIUM. ROYAL. SILVERY. CINEMATIC. IMMERSIVE. ORIGINAL. FAST. FUNCTIONAL. CONVERSION-READY.
